

Cool Homes is a rebate program that helps KCP&L customers maintain the operating efficiency of central A/C systems and offsets the cost of upgrading to a new high-efficiency system. KCP&L customers can save energy and reduce cooling costs

while staying comfortable all year long.

KCP&L customers may have their existing central air cooling systems tested by CheckMe!-trained A.B. May technician to see if it can be brought back to manufacturers' specifications or replaced with a high-efficiency A/C or heat pump.

KCP&L offers instant rebates up to \$850 from A.B. May toward the purchase of a new energy-efficient A/C or heat pump.

How the Cool Homes Program Works

- KCP&L customers may have their existing central air cooling system tested by a CheckMe!-trained A.B. May technician to see if it can be brought back to manufacturers' specifications or replaced with a high-efficiency air-conditioner or heat pump.
- Rebates are applied, per system, toward the purchase of a high-efficiency A/C or heat pump through A.B. May. (For example, a large house with three air conditioners may qualify for a rebate on each of the three air conditioners.)
- KCP&L customers may qualify for basic maintenance services to help tune-up qualifying equipment, even if they do not purchase a new system. If the cooling system can be brought back to manufacturers' specifications, limited services such as recharging the cooling refrigerant, providing non-ductwork airflow adjustments and basic filter cleaning or replacement may be provided. (Customers may receive a quote for additional costs required to service the equipment.)

Rebates and Incentives

- Instant rebates of \$650 and \$850 may be available (at the time of purchase) for customers who replace their inefficient equipment with new equipment rated at 14/15 SEER or 16 SEER and above.
- No paperwork is required to claim this rebate incentive. KCP&L pays A.B. May and customers receive the savings in the form of a credit on the invoice when purchasing a new high-efficiency system.
- Customers purchasing electric heat pumps may qualify for a lower electric rate through KCP&L.
- A \$300 government tax credit may be available for purchasing high-efficiency cooling equipment. Learn more at www.energy.gov/taxbreaks.htm.
- All customers receiving a CheckMe! evaluation will get a FREE six-pack of compact fluorescent light bulbs.
